LOCUS       HUMRB1MRNA   4839 bp    mRNA            PRI       05-MAY-1995
DEFINITION  Homo sapiens retinoblastoma susceptibility protein (RB1) mRNA and
            mutations.
ACCESSION   L41870
VERSION     L41870.1  GI:793994
KEYWORDS    retinoblastoma protein; retinoblastoma susceptibility.
SOURCE      Homo sapiens cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.

LOCUS       HUMRB1MRNA   4839 bp    mRNA            PRI       05-MAY-1995
DEFINITION  Homo sapiens retinoblastoma susceptibility protein (RB1) mRNA and
            mutations.
ACCESSION   L41870
VERSION     L41870.1  GI:793994
KEYWORDS    retinoblastoma protein; retinoblastoma susceptibility.
SOURCE      Homo sapiens cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.

LOCUS       HUMRBA1RA    4600 bp    mRNA            PRI      12-JUL-1995
DEFINITION  Human retinoblastoma associated (RB1) mRNA, complete cds.
ACCESSION   M33647 J02994
VERSION     M33647.1  GI:190945
KEYWORDS    retinoblastoma protein.
SOURCE      Homo sapiens (clone: p4.7R) cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1  (bases 1 to 4600)
  AUTHORS   Friend,S.H., Horowitz,J.M., Gerber,M.R., Wang,X.F., Bogenmann,E.,
            Li,F.P. and Weinberg,R.A.
  TITLE     Deletions of a DNA sequence in retinoblastomas and mesenchymal
            tumors: organization of the sequence and its encoded protein
            [published erratum appears in Proc Natl Acad Sci U S A 1988
            Apr;85(7):2234]
  JOURNAL   Proc. Natl. Acad. Sci. U.S.A. 84 (24), 9059-9063 (1987)
  MEDLINE   88097427
COMMENT     Draft entry and computer-readable copy of sequence for [1] kindly
            provided by S.H.Friend, 10-FEB-1988.

LOCUS       HUMRBS       4740 bp    mRNA            PRI       12-JUL-1995
DEFINITION  Human retinoblastoma susceptibility mRNA, complete cds.
ACCESSION   M15400
VERSION     M15400.1  GI:190958
KEYWORDS    retinoblastoma susceptibility.
SOURCE      Homo sapiens (clone: RB-[1,5]) foetus retina cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1  (bases 243 to 4740)
  AUTHORS   Lee,W.H., Bookstein,R., Hong,F., Young,L.J., Shew,J.Y. and Lee,E.Y.
  TITLE     Human retinoblastoma susceptibility gene: cloning, identification,
            and sequence
  JOURNAL   Science 235 (4794), 1394-1399 (1987)
  MEDLINE   87149066
REFERENCE   2  (bases 1 to 480)
  AUTHORS   Lee,E.Y., Bookstein,R., Young,L.J., Lin,C.J., Rosenfeld,M.G. and
            Lee,W.H.
  TITLE     Molecular mechanism of retinoblastoma gene inactivation in
            retinoblastoma cell line Y79
```

```
  JOURNAL   Proc. Natl. Acad. Sci. U.S.A. 85 (16), 6017-6021 (1988)
  MEDLINE   88320373
COMMENT     Draft entry and computer-readable copy of sequence in [1] kindly
            provided by R.Bookstein, 27-APR-1987.

  TITLE     Molecular mechanism of retinoblastoma gene inactivation in
            retinoblastoma cell line Y79
  JOURNAL   Proc. Natl. Acad. Sci. U.S.A. 85 (16), 6017-6021 (1988)
  MEDLINE   88320373
COMMENT     Draft entry and computer-readable sequence for [1] kindly provided
            by E.Y.-H.P.Lee, 15-JUL-1988 The deletion spans exons 2-6 of the
            normal gene.

LOCUS       HUMRB1MRNA   4839 bp    mRNA            PRI       05-MAY-1995
DEFINITION  Homo sapiens retinoblastoma susceptibility protein (RB1) mRNA and
            mutations.
ACCESSION   L41870
VERSION     L41870.1  GI:793994
KEYWORDS    retinoblastoma protein; retinoblastoma susceptibility.
SOURCE      Homo sapiens cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.

LOCUS       HUMRBA1RA    4600 bp    mRNA            PRI       12-JUL-1995
DEFINITION  Human retinoblastoma associated (RB1) mRNA, complete cds.
ACCESSION   M33647 J02994
VERSION     M33647.1  GI:190945
KEYWORDS    retinoblastoma protein.
SOURCE      Homo sapiens (clone: p4.7R) cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1  (bases 1 to 4600)
  AUTHORS   Friend,S.H., Horowitz,J.M., Gerber,M.R., Wang,X.F., Bogenmann,E.,
            Li,F.P. and Weinberg,R.A.
  TITLE     Deletions of a DNA sequence in retinoblastomas and mesenchymal
            tumors: organization of the sequence and its encoded protein
            [published erratum appears in Proc Natl Acad Sci U S A 1988
            Apr;85(7):2234]
  JOURNAL   Proc. Natl. Acad. Sci. U.S.A. 84 (24), 9059-9063 (1987)
  MEDLINE   88097427
COMMENT     Draft entry and computer-readable copy of sequence for [1] kindly
            provided by S.H.Friend, 10-FEB-1988.

LOCUS       HUMRBSA      2994 bp    mRNA            PRI       12-JUL-1995
DEFINITION  Human retinoblastoma susceptibility protein mRNA, complete cds.
ACCESSION   M28419
VERSION     M28419.1  GI:190962
KEYWORDS    retinoblastoma protein; retinoblastoma susceptibility protein.
SOURCE      Homo sapiens retinoblastoma cDNA to mRNA.
  ORGANISM  Homo sapiens
            Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia;
            Eutheria; Primates; Catarrhini; Hominidae; Homo.
REFERENCE   1  (bases 1 to 2994)
  AUTHORS   Lee,W.H., Shew,J.Y., Hong,F.D., Sery,T.W., Donoso,L.A., Young,L.J.,
            Bookstein,R. and Lee,E.Y.
  TITLE     The retinoblastoma susceptibility gene encodes a nuclear
            phosphoprotein associated with DNA binding activity
  JOURNAL   Nature 329 (6140), 642-645 (1987)
  MEDLINE   88014238

PT Retinoblastoma suppressor protein with N-terminal modification -
PT inhibiting cellular proliferation, particularly cancer
PS Claim 22; Page 142-147; 249pp; English.
CC This sequence encodes a modified retinoblastoma tumour suppressor
CC protein (RTSP) of the invention. The proteins can be used for inhibiting
CC cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC can be used for treating diseases characterised by abnormal cellular
CC proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC activity than wild type RTSPs.

PT Retinoblastoma suppressor protein with N-terminal modification -
PT inhibiting cellular proliferation, particularly cancer
PS Disclosure; Page 121-126; 249pp; English.
CC This sequence encodes a modified retinoblastoma tumour suppressor
CC protein (RTSP) of the invention. The proteins can be used for inhibiting
CC cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC can be used for treating diseases characterised by abnormal cellular
CC proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC activity than wild type RTSPs.

PT New tetracycline responsive expression vectors - used for the

PT tightly controlled expression of genes, such as tumour suppressor
PT genes for treating cancers
PS Disclosure; Pages 145-150; 190pp; English.
CC The present sequence appears in the specification, which describes a
CC tetracycline responsive expression vector (TREV), which contains a
CC sequence encoding a fusion protein comprising a transcriptional
CC transactivation domain (TTD) operatively attached to a tetracycline
CC repressor protein (TRP), the first sequence operatively positioned
CC downstream of a promoter. The vector also contains a cloning site
CC operatively positioned downstream of a basal promoter comprising a
CC tetracycline operator. The TREVs can be used to produce stable cell
CC lines in which gene expression is tightly regulated by tetracycline.
CC They can be used for the production of proteins such as tumour
CC suppressor proteins which can be used for treating diseases characterised
CC by abnormal cellular proliferation, particularly cancers.

PT Retinoblastoma suppressor protein with N-terminal modification -
PT inhibiting cellular proliferation, particularly cancer
PS Claim 22; Page 150-155; 249pp; English.
CC This sequence encodes a modified retinoblastoma tumour suppressor
CC protein (RTSP) of the invention. The proteins can be used for inhibiting
CC cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC can be used for treating diseases characterised by abnormal cellular
CC proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC activity than wild type RTSPs.

PT   Diagnosing the presence of defective retinoblastoma alleles -
PT   comprises comparing genetic material corresponding to a normal
PT   human retinoblastoma with DNA from a patient.
PS   Example 2(2); Figure 7; 18pp; English.
CC   A method for detecting the presence, in a tumour sample, of a protein
CC   the absence of which is associated with a neoplasm, comprises
CC   producing an antibody to the protein and then contacting the
CC   antibody with the tumour sample.  Immune complexes indicate the
CC   presence of the protein in the sample.  The method may be used in
CC   the detection and treatment of a defective human gene related to
CC   cancer, in particular retinoblastoma.

PT Isolated human retinoblastoma gene - used to develop products for
PT analysing predisposition to retinoblastoma and for the detection and
PT treatment of retinoblastoma
PS Claim 8; Fig 5; 32pp; English.
CC This is the nucleic acid sequence of a cDNA of the normal human
CC retinoblastoma gene Rb. Absence or mutation of the Rb gene (see
CC also X04502) predisposes an individual to retinoblastoma. To
CC isolate Rb cDNA, the human DNA probe pH3-8, isolated from a human
CC chromosome 13 lambda phage library, was used in a chromosome walk

```
CC   to isolate and map 30 kb of genomic DNA surrounding the H3-8
CC   sequence.  Fragment p7H30.7R (ATCC 97500) was obtained, and was
CC   used as a probe to screen a cDNA library that had been constructed
CC   from an adenovirus 12-transformed human embryonic retinal cell
CC   line.  This provided clone p4.7R (ATCC 97383), which in Northern
CC   blots cross-reacted with a 4.7 kb transcript in transformed
CC   retinal cells which was not present in 4 retinoblastoma and one
CC   osteosarcoma cell samples.  Rb nucleic acids comprising the Rb
CC   gene, cDNA or a fragment of the gene, such as one of the 27 exons
CC   or 26 introns, can be used in a claimed method for detecting a
CC   deletion or point mutation in the Rb gene of a human patient.  The
CC   gene can also be used to synthesize Rb polypeptide (see Y01542) for
CC   use in the treatment of individuals determined to have a defective
CC   Rb allele.

PT   Retinoblastoma suppressor protein with N-terminal modification -
PT   inhibiting cellular proliferation, particularly cancer
PS   Claim 22; Page 226-230; 249pp; English.
CC   This sequence encodes a modified retinoblastoma tumour suppressor
CC   protein (RTSP) of the invention. The proteins can be used for inhibiting
CC   cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC   can be used for treating diseases characterised by abnormal cellular
CC   proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC   activity than wild type RTSPs.

PT Diagnosis of retinoblastoma - using genetic material corresp. to a normal
PT human retinoblastoma gene or a unique sub-region
PS Disclosure; p; English.
CC This gene encodes a protein, the absence of which is associated with a
CC neoplasm. It is used to produce an antibody to the protein, contacting
CC this with the tumour sample and detecting immune complexes as indication
CC of the presence in the tumour sample of the protein. Whole sequence or
CC a unique sub-region can be used. The method identifies patients lacking
CC the defective retinoblastoma (Rb) allele and thus are not at risk of
CC developing the disease.

PT   Controlling cancer -
PT   by replacing ineffective cancer suppressing gene with cloned,
PT   active gene.
```

PS Claim 35; Page 86; 105pp; English.
CC Gene is taken from human chromosome 13q14 retinoblastoma (RB) cDNA.
CC By installing a working CSG, safe and specific treatment and
CC prophylaxis can be given to cancer patients.

PT   Method of controlling cell cycle progression - uses purified
PT   retinoblastoma protein or fragment, for use in combination with
PT   therapeutic methods to arrest tumorigenesis
PS   Disclosure; Fig 9; 68pp; English.
CC   The sequence is that of the retinoblastoma gene which encodes the
CC   retinoblastoma (RB) protein which may be used as part of a method of
CC   controlling cell cycle progression which may be used in combination
CC   with therapeutic methods to arrest tumourigenesis in organisms. The
CC   cell cycle can be reversibly arrested in a convenient and safe
CC   manner. The protein is used in a compsn. is relatively inexpensive
CC   and readily obtainable, and shows little or no toxic effects on
CC   healthy cells. It is also compatible with other methods and devices
CC   for regulating certain physiological processes of the body, such as
CC   blood cell prodn. and gamete prodn. Fragments of the protein are
CC   soluble in low concns. of glycerol thus enhancing their value in
CC   pharmaceutical applicns.

PT   New fusion polypeptide of, e.g. transcription factor - used to
PT   treat, e.g. hyper-proliferative disease such as cancer and
PT   restenosis
PS   Example 1; Fig 2A; 91pp; English.
CC   This nucleotide sequence includes a coding region for retinoblastoma
CC   protein RB (see W62465). A new claimed polypeptide is a fusion of:
CC   (i) a transcription factor (TF) comprising a DNA binding domain,
CC   and (ii) a retinoblastoma (Rb) polypeptide that includes a growth
CC   suppression domain. Also new are: (1) a nucleic acid encoding the
CC   fusion protein, and (2) expression vectors containing such DNA.
CC   The fusion protein, particularly expressed from gene therapy
CC   vectors (especially adenovirus vectors), is used to treat
CC   hyperproliferative conditions, specifically cancer (particularly of
CC   the bladder) or restenosis (after angioplasty), but also diabetic
CC   retinopathy, thyroid hyperplasia, Grave's disease, psoriasis,
CC   benign prostatic hypertrophy, Li-Fraumeni syndrome and peripheral
CC   vascular disease. Tissue-specific expression of E2F-RB fusions is
CC   provided. The fusion proteins are more effective in repressing
CC   transcription of the E2F promoter than Rb alone and cause cell-cycle
CC   arrest in a variety of cells.

PT   Inhibition of cancer cell proliferation - with retinoblastoma
PT   protein or polypeptide
PS   Example 1; Fig 2A-K; 72pp; English.
CC   The present sequence encodes a human retinoblastoma (RB) protein
CC   designated ppRB-110 or p110-RB. The protein is used in a method
CC   for inhibiting proliferation of pathologically proliferating cells
CC   lacking endogenous functional retinoblastoma protein. The method
CC   comprises contacting the cells with a polypeptide comprising a 56 kD
CC   C-terminal fragment of retinoblastoma protein. The method is useful
CC   for treating cancers, especially retinoblastoma or secondary
CC   osteosarcoma, breast cancer, small-cell lung cancer or fibrosarcoma.

PT   Controlling cancer -
PT   by replacing ineffective cancer suppressing gene with cloned,
PT   active gene.
PS   Claim 35; Page 86; 105pp; English.
CC   Gene is taken from human chromosome 13q14 retinoblastoma (RB) cDNA.
CC   By installing a working CSG, safe and specific treatment and
CC   prophylaxis can be given to cancer patients.

PT   Method of controlling cell cycle progression - uses purified
PT   retinoblastoma protein or fragment, for use in combination with
PT   therapeutic methods to arrest tumorigenesis
PS   Disclosure; Fig 9; 68pp; English.
CC   The sequence is that of the retinoblastoma gene which encodes the
CC   retinoblastoma (RB) protein which may be used as part of a method of
CC   controlling cell cycle progression which may be used in combination
CC   with therapeutic methods to arrest tumourigenesis in organisms. The
CC   cell cycle can be reversibly arrested in a convenient and safe
CC   manner. The protein is used in a compsn. is relatively inexpensive
CC   and readily obtainable, and shows little or no toxic effects on
CC   healthy cells. It is also compatible with other methods and devices
CC   for regulating certain physiological processes of the body, such as
CC   blood cell prodn. and gamete prodn. Fragments of the protein are
CC   soluble in low concns. of glycerol thus enhancing their value in
CC   pharmaceutical applicns.

PT   Retinoblastoma suppressor protein with N-terminal modification -
PT   inhibiting cellular proliferation, particularly cancer
PS   Disclosure; Page 121-126; 249pp; English.
CC   This sequence encodes a modified retinoblastoma tumour suppressor
CC   protein (RTSP) of the invention. The proteins can be used for inhibiting
CC   cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC   can be used for treating diseases characterised by abnormal cellular
CC   proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC   activity than wild type RTSPs.

PT   Retinoblastoma suppressor protein with N-terminal modification -
PT   inhibiting cellular proliferation, particularly cancer
PS   Claim 22; Page 142-147; 249pp; English.
CC   This sequence encodes a modified retinoblastoma tumour suppressor
CC   protein (RTSP) of the invention. The proteins can be used for inhibiting
CC   cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC   can be used for treating diseases characterised by abnormal cellular
CC   proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC   activity than wild type RTSPs.

PT   New tetracycline responsive expression vectors - used for the
PT   tightly controlled expression of genes, such as tumour suppressor
PT   genes for treating cancers
PS   Disclosure; Pages 145-150; 190pp; English.
CC   The present sequence appears in the specification, which describes a
CC   tetracycline responsive expression vector (TREV), which contains a
CC   sequence encoding a fusion protein comprising a transcriptional
CC   transactivation domain (TTD) operatively attached to a tetracycline
CC   repressor protein (TRP), the first sequence operatively positioned
CC   downstream of a promoter. The vector also contains a cloning site
CC   operatively positioned downstream of a basal promoter comprising a
CC   tetracycline operator. The TREVs can be used to produce stable cell
CC   lines in which gene expression is tightly regulated by tetracycline.
CC   They can be used for the production of proteins such as tumour
CC   suppressor proteins which can be used for treating diseases characterised
CC   by abnormal cellular proliferation, particularly cancers.

PT   New fusion polypeptide of, e.g. transcription factor  - used to
PT   treat, e.g. hyper-proliferative disease such as cancer and
PT   restenosis
PS   Example 1; Fig 2A; 91pp; English.
CC   This nucleotide sequence includes a coding region for retinoblastoma
CC   protein RB (see W62465).  A new claimed polypeptide is a fusion of:
CC   (i) a transcription factor (TF) comprising a DNA binding domain,
CC   and (ii) a retinoblastoma (Rb) polypeptide that includes a growth
CC   suppression domain.  Also new are: (1) a nucleic acid encoding the
CC   fusion protein, and (2) expression vectors containing such DNA.
CC   The fusion protein, particularly expressed from gene therapy
CC   vectors (especially adenovirus vectors), is used to treat
CC   hyperproliferative conditions, specifically cancer (particularly of
CC   the bladder) or restenosis (after angioplasty), but also diabetic
CC   retinopathy, thyroid hyperplasia, Grave's disease, psoriasis,
CC   benign prostatic hypertrophy, Li-Fraumeni syndrome and peripheral
CC   vascular disease.  Tissue-specific expression of E2F-RB fusions is
CC   provided.  The fusion proteins are more effective in repressing
CC   transcription of the E2F promoter than Rb alone and cause cell-cycle
CC   arrest in a variety of cells.
SQ   Sequence   2994 BP;   974 A;    618 C;    593 G;    809 T;

PT   Inhibition of cancer cell proliferation - with retinoblastoma
PT   protein or polypeptide
PS   Example 1; Fig 2A-K; 72pp; English.
CC   The present sequence encodes a human retinoblastoma (RB) protein
CC   designated ppRB-110 or p110-RB. The protein is used in a method
CC   for inhibiting proliferation of pathologically proliferating cells
CC   lacking endogenous functional retinoblastoma protein. The method
CC   comprises contacting the cells with a polypeptide comprising a 56 kD
CC   C-terminal fragment of retinoblastoma protein. The method is useful
CC   for treating cancers, especially retinoblastoma or secondary
CC   osteosarcoma, breast cancer, small-cell lung cancer or fibrosarcoma.

PT   Diagnosing the presence of defective retinoblastoma alleles -
PT   comprises comparing genetic material corresponding to a normal
PT   human retinoblastoma with DNA from a patient.
PS   Example 2(2); Figure 7; 18pp; English.
CC   A method for detecting the presence, in a tumour sample, of a protein
CC   the absence of which is associated with a neoplasm, comprises
CC   producing an antibody to the protein and then contacting the
CC   antibody with the tumour sample.  Immune complexes indicate the
CC   presence of the protein in the sample.  The method may be used in
CC   the detection and treatment of a defective human gene related to
CC   cancer, in particular retinoblastoma.

PT   Adenoviral vector with deletion of viral protein IX contains
PT   foreign gene - esp. encoding tumour suppressor protein for gene
PT   therapy of tumours, reduces contamination by wild type adenovirus
PS   Disclosure; Fig 3; 92pp; English.
CC   The sequence is that of the DNA sequence encoding a retinoblastoma
CC   tumour protein. The gene can be used in a novel method involving a
CC   recombinant adenovirus expression vector to treat diseases
CC   associated with the ansence of the TSg or the presence of a mutated
CC   TSG, e.g. many forms of carcinoma, sickle cell anaemia or Tay-Sach's
CC   disease.
CC   See also Q90060-5.

PT Isolated human retinoblastoma gene - used to develop products for
PT analysing predisposition to retinoblastoma and for the detection and
PT treatment of retinoblastoma
PS Claim 8; Fig 5; 32pp; English.
CC This is the nucleic acid sequence of a cDNA of the normal human
CC retinoblastoma gene Rb. Absence or mutation of the Rb gene (see
CC also X04502) predisposes an individual to retinoblastoma. To
CC isolate Rb cDNA, the human DNA probe pH3-8, isolated from a human
CC chromosome 13 lambda phage library, was used in a chromosome walk
CC to isolate and map 30 kb of genomic DNA surrounding the H3-8
CC sequence. Fragment p7H30.7R (ATCC 97500) was obtained, and was
CC used as a probe to screen a cDNA library that had been constructed
CC from an adenovirus 12-transformed human embryonic retinal cell
CC line. This provided clone p4.7R (ATCC 97383), which in Northern
CC blots cross-reacted with a 4.7 kb transcript in transformed
CC retinal cells which was not present in 4 retinoblastoma and one
CC osteosarcoma cell samples. Rb nucleic acids comprising the Rb
CC gene, cDNA or a fragment of the gene, such as one of the 27 exons
CC or 26 introns, can be used in a claimed method for detecting a
CC deletion or point mutation in the Rb gene of a human patient. The
CC gene can also be used to synthesize Rb polypeptide (see Y01542) for
CC use in the treatment of individuals determined to have a defective
CC Rb allele.

PT Retinoblastoma suppressor protein with N-terminal modification -
PT inhibiting cellular proliferation, particularly cancer
PS Claim 22; Page 158-162; 249pp; English.
CC This sequence encodes a modified retinoblastoma tumour suppressor
CC protein (RTSP) of the invention. The proteins can be used for inhibiting
CC cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC can be used for treating diseases characterised by abnormal cellular
CC proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC activity than wild type RTSPs.

PT Diagnosis of retinoblastoma - using genetic material corresp. to a normal
PT human retinoblastoma gene or a unique sub-region
PS Disclosure; p; English.
CC This gene encodes a protein, the absence of which is associated with a
CC neoplasm. It is used to produce an antibody to the protein, contacting
CC this with the tumour sample and detecting immune complexes as indication
CC of the presence in the tumour sample of the protein. Whole sequence or
CC a unique sub-region can be used. The method identifies patients lacking
CC the defective retinoblastoma (Rb) allele and thus are not at risk of
CC developing the disease.

PT   Retinoblastoma suppressor protein with N-terminal modification -
PT   inhibiting cellular proliferation, particularly cancer
PS   Claim 22; Page 226-230; 249pp; English.
CC   This sequence encodes a modified retinoblastoma tumour suppressor
CC   protein (RTSP) of the invention. The proteins can be used for inhibiting
CC   cellular proliferation, when coadministered with a p53 protein. The RTSPs
CC   can be used for treating diseases characterised by abnormal cellular
CC   proliferation, particularly cancers. The RTSPs have a broader spectrum of
CC   activity than wild type RTSPs.
